9. Main Scientific Research Areas

Amatore’s researches correspond to 506 original research articles published in peer reviewed international journals, 10 French Habilitation Theses, 59 French Ph.D. and 7 Ph.D. defended in foreign Countries, 7 Patents and over than 300 Distinguished,

Award, Named and Plenary Lectures. Altogether, according to the Web of Science database (June 2020) these works cumulate over than 25 500 citations, corresponding to a h-index of 82 with an increasing citation rate, being above 1200 citations per year over the past seven years. They are mostly rooted on molecular electrochemistry developed towards the investigation of the three following main areas:

- Theoretical and experimental developments in molecular and analytical electrochemistry (ultramicro- and nanoelectrodes: diffusional transport, chemical mechanisms, single electron transfer catalysis),
- Biological applications of micro- and nanoelectrodes at the single cell level: vesicular neurotransmitter exocytosis; oxidative stress in tissues,
- Mechanisms of cross-coupling reaction by transition metal complexes (Ni, Pd).
