## RESEARCH TOPICS

- Since 2016, Prof. Rajaa Cherkaoui El Moursli is a member of the International Collaboration KM3NET. KM3NeT is the next generation neutrino telescope. Once completed, it will have a detector volume of several cubic kilometres of clear sea water. Located in the deepest seas of the Mediterranean, it will open a new window on our Universe. With the telescope scientists

of KM3NeT will search for neutrinos from distant astrophysical sources such as supernovae, gamma ray bursters or colliding stars. An array of thousands of optical sensors will detect the faint light in the deep sea from charged particles originating from collisions of the neutrinos and the Earth. The facility will also house instrumentation for Earth and Sea sciences for long term and on-line monitoring of the deep sea environment and the sea bottom at depth of several kilometers. A new initiative is to extend the KM3NeT Research Facility with a neutrino detector dedicated to particle physics research exploiting oscillations in atmospheric neutrinos. One part of this detector will be built and tested at the Faculty of Sciences in Rabat

- Since 1996, Prof. Rajaa Cherkaoui El Moursli is a Member of the International Collaboration ATLAS (174 institutions in 38 countries). ATLAS (A Toroidal LHC ApparatuS) is one of the experiments equipping the collision points at the Large Hadron Collider (LHC) at CERN-Geneva started by the end of the year 2009. The main goal of the experiment is the discovery of the Higgs boson, the missing piece in the Standard Model (SM) of Particle Physics and to explore physics beyond the SM. The Nobel Prize in Physics 2013 was awarded jointly to François Englert and Peter W. Higgs for the theoretical discovery of a mechanism that contributes to our understanding of the origin of mass of subatomic particles, and which was confirmed through the discovery of the predicted fundamental particle on 2012, by the ATLAS and CMS experiments at CERN's Large Hadron Collider. The calorimeters are the vital sub-detectors of ATLAS and are playing a key role in the discovery potential aimed by the experiment since they are devices for measuring particles energy. R. Cherkaoui had the opportunity to accompany the detector during its phase of construction, simulation, test and launch. Now her contribution work focuses on data analysis of this experiment.
- Prof. Cherkaoui has developed research in Medical Physics in Morocco by the implementation of the first Master of medical physics (2007-2009). This has allowed providing new hospitals radiation physicists, which has followed the national strategy in this area, in particular the creation of number of services nuclear medicine and radiotherapy throughout Morocco. Currently, an important team is working in Simulation and imaging in Medical Physics (Radiotherapy, Radiology and Nuclear Medicine).
- In 1982, she joined the Faculty of Sciences, University Mohammed V - Agdal Rabat as a researcher professor; and since 1996 she worked as a head of the Laboratory of Nuclear Physics (LPNR). This responsibility led her to develop several themes around nuclear applications: neutron activation; ICP-MS; study and monitoring of environmental pollution; Study of retention modes of heavy metals and radionuclide in Moroccan apatite phosphates and their residues for potential applications in pollution control; Neutron scattering on powders, crystal structures and magnetic; Imagery.
